General Information Series No. 785

Intermodal Loads Secured with Ty-Gard DS™ Barriers (Intermodal Loading Guide Method B-9)

GENERAL RULES

The General Rules relating to personal safety and the safe operation of trains, contained in AAR Circular Nos. 42-M and 43-G or supplements thereto, issued by the Association of American Railroads, **must be observed**.

These loading rules and/or practices apply to shipments transported in the USA, Canada and Mexico.

The loading methods in individual closed car loading publications issued by the Damage Prevention and Loading Services Section of the Association of American Railroads are minimum standards that have been evaluated and approved. These minimum standards offer practical guidelines on the subjects covered. Since these are minimum standards, it may be necessary to supplement these methods in some instances.

Securement standards in AAR closed car loading publications are intended for safe transit of the rail car from origin to destination and prevention of lading and equipment damage. These standards do not address unloading practices.

This approval may be withdrawn if the loads using these methods exhibit consistent load failure during actual shipments.

*Loading and bracing methods not presently approved may receive consideration for approval and publication under Section II - Evaluation of New Loading and Bracing Methods and Materials for Closed Cars, Trailers or Containers of **General Information Bulletin No. 2, "Rules and Procedures for Testing of New Loading and Bracing Methods or Materials"**. Submit requests to Director Damage Prevention and Loading Services, AAR/TTCI, 55500 DOT Road, Pueblo, CO 81001.*

CAUTION: Car rocking motion caused by the lift equipment entering and/or exiting the rail car may cause unsupported packages or articles with a higher center of gravity to fall to the floor. Minimize access to the car. Exercise caution when inside a partially loaded car. Lift operators should stay on lift equipment, whenever possible, while inside a partially loaded car.

GENERAL

Ty-Gard DS has been approved as a substitute for Ty-Gard 2000 in the following loading and securement methods published in the AAR Intermodal Loading Guide.

B— Ty-Gard 2000

- ◆ **Method B-1** Drums Loaded in Two or Three Sections Secured with Ty-Gard 2000 Barriers
- ◆* **Method B-2** Mixed Load Secured with Ty-Gard 2000 Barriers
- ◆* **Method B-3** Double-Layer Load Secured with Ty-Gard 2000 Barriers in a 20 ft Container
- ◆* **Method B-4** 40 in. Diameter Roll Printing Paper Secured with Ty-Gard 2000 Barriers
- ◆* **Method B-6** Bulk Boxes Secured with Floor Blocking and Ty-Gard 2000 Barriers
- ◆ **Method B-8** Seventy-Eight to Eighty Closed-Head 55-Gallon Steel or Plastic Drums in Two Layers Secured by Ty-Gard 2000 in a 20 ft ISO Container
- Method B-9** Intermodal Loads Secured with Ty-Gard DS Barriers

◆ Methods marked with a diamond (◆) have been recommended for hazardous materials loading by the Bureau of Explosives Steering Committee.

* Methods marked with an asterisk (*) have been tested to 8 mph.

General Information Series No. 785

Intermodal Loads Secured with Ty-Gard DS™ Barriers

(Intermodal Loading Guide Method B-9)

Use this loading method for 55-gallon steel closed-head drums in two layers in a 20 ft ISO container. Steel drums should have the W-style rolling hoop. Load drums in a modified 4-3-4 pattern for 80-drum loads.

Illustration No. 4.8A: 80 Drums Loaded in Two Layers in a 20 ft. Container

1. Load 40 drums in a modified 4-3-4 pattern in each layer for a 80 drum load. Use ½ in. thick plywood, or equivalent strength material, as a separator between each layer. The separator material runs the full width of the container and the full length of the load.
2. The following layer separators listed in Table 1 have been evaluated and found acceptable for one-time use with this loading method. These separators were tested under simulated conditions, and their acceptance may be withdrawn if loads exhibit consistent load failures. If used with hazmat loads, these panels must be compatible with the contents of the drums.

Name	Thickness	Description	Vendor
Drum Tite	3.0 mm, 3.2 mm	Eucalyptus hardboard	Lodge Lumber
Drum Sep	3.2 mm	Eucalyptus hardboard	Pasadena Skid and Pallet Inc.
Ship Tite 2	.375 in.	Corrugated (<i>not</i> for use with corrosives)	Allegheny Industrial Associates
Ship Tite 3	.625 in.	Corrugated (<i>not</i> for hazmat use)	Allegheny Industrial Associates
Ship Tite 5	3.2 mm	Corrugated	Allegheny Industrial Associates
Generic	3.0 mm	Eucalyptus hardboard	Greif
PlyVeneer®	3.0 mm	Wood veneer with a Kraft linerboard overlay	PlyVeneer Products
Tier 55	1.0 in., 0.50 in.	Corrugated	Damage Prevention Company

Table 1 – Approved Layer Separators

3. Secure the nose section of the load through the use of Ty-Gard DS barriers after the seventh stack. Secure each layer with one 24 in. wide strip of Ty-Gard DS. Attach the Ty-Gard DS to the sidewalls (per manufacturer's instructions) with an adhesive strip at least 75 in. long and at least 36 in. back from the face of the last stack in this section. When used with containers with corrugated sidewalls, follow the contour of the corrugations.
4. Tension and seal all Ty-Gard DS barriers in accordance with manufacturer's instructions. Use tape or other suitable material to maintain each barrier in position.
5. Load the remaining drums in a 4-3-4-3 pattern. Secure the rear of the load using one Ty-Gard DS barrier per layer. Attach each barrier to the sidewalls of the container (per manufacturer's instructions) with an adhesive strip at least 75 in. long and at least one stack back from the face of the load. When used in containers with corrugated sidewalls, follow the contour of the corrugations.
6. Tension and seal all Ty-Gard DS barriers in accordance with the manufacturer's instructions. Use tape or other suitable material to maintain each barrier in position.
